Vicomsoft announces Email Filtering Solution

Vicomsoft today announced the launch of InterGate Mail Service, a managed email filtering service. Designed for corporate networks of any size, it protects business against both Spam and Viruses for both email and images, whilst delivering 0% false-positives.

The volume of spam emails being sent has recently risen dramatically on a global scale - more than doubling in quantity since June 2006. Consequently, any business that does not employ an effective spam management technique will have noticed a considerable increase in the amount of spam they have received over this period. It is estimated that up to 75% of all corporate email received is Spam.

"Vicomsoft is delighted to be able to bring this managed solution to market" says David Townend, CEO, "hardware and software solutions, which purport to combat the problem, require at least a degree of user intervention or management in order to be effective. Vicomsoft's solution requires no such intervention".

InterGate Mail Service from Vicomsoft offers a number of key benefits. For example, managed services operate outside the local IT environment, that is, the corporate network or ISP's mailservers - which ensures that users do not need to manage or update the service with virus definitions.

Also, as email is managed externally, InterGate Mail Service eliminates the problem of wasted bandwidth due to spam and viruses, effectively providing additional resources within the user organization. It delivers added functionality, such as 'Zero Hour' protection from the initial seconds of a spam or virus outbreak, protection against Denial of Service or Directory Harvest attacks, powerful rules engines and visual reporting mechanisms.

"We have large corporates and many SME clients, as well as public sector clients especially in education and the police, using Vicomsoft solutions. The ease of setup and ability to apply flexible filters for both Internet use and Email filtering gives the IT team peace of mind". Says Paul Conibere, Senior Technical Consultant for Vicomsoft.

Vicomsoft InterGate Email Service is available from 1st February 2007. A risk-free 14 days trial is available from www.vicomsoft.com.
