# THE INTERGATE POLICY MANAGER SUITE

The InterGate Policy Manager Suite from Vicomsoft offers unequalled flexibility and extensibility for the enterprise to manage and control user Internet activity.

The deployment of InterGate Policy Manager Suite greatly increases productivity, enhances security, reduces legal liability and optimises the use of IT resources for any organisation.

InterGate POLICY MANAGER

InterGate Policy Manager provides a comprehensive platform for seamless integration with InterGate Intercept for policing access to applications such as Instant Messaging, Peer-to-Peer and Skype; InterGate Inspect, a master database of web categories and InterGate Intelligence for logging and reporting of Internet usage and policy breaches. It also serves as a core router and firewall providing advanced protection from the threats of Internet intrusion.

Advanced Web Filtering
InterGate Policy Manager allows complete control of who can see what and when they can see it via the use of web filters and time controls.

User-defined filters :	Allow or deny access to specified sites.
Pre-defined filters :	By use of InterGate Intercept, a database of categorized sites.
Protocol Filters :	Block specific types of traffic e.g. FTP, HTTP.
Time controls :	Specify which filters apply at which times of the day and/or days of the week.

InterGate INTERCEPT

InterGate Policy Manager works with InterGate Intercept to provide administrators with the ability to block or allow Instant Messaging (IM) applications such as AIM (AOL Instant Messenger), ICQ, Yahoo Messenger, MSN Messenger; Peer-to-Peer applications like eDonkey, eMule, Kademlia, BitTorrent, Gnutella (Morpheus, LimeWire), Kazaa and the Internet telephony application, Skype, on a per user, per group or per machine basis.

InterGate INSPECT

InterGate Inspect is a database of over 13 Million Sites covering 2 billion web pages and 40 well-organized categories, which are updated on a daily basis. InterGate Policy Manager integrates with InterGate Inspect to automatically check against this database for new sites by accessing a suite of Vicomsoft centrally managed servers. Once a web page has been checked, its category is stored in a local cache for future reference.

InterGate INTELLIGENCE

InterGate Intelligence presents fully drillable reports showing both summary and detailed information regarding the use of Internet resources. Destination reports can be produced to identify the kind of traffic users are requesting listed by port or protocol and the time of occurrence. Also attainable are full reports of network intrusion attempts blocked by the firewall, DHCP and other network management events.

Flexible, Reliable, Robust
The InterGate family of products running on Mac OS X and Windows, easily outperform the majority of hardware devices in a similar price range. With the ability to control Internet connections up to and exceeding 60Mbps (40 x faster than a standard US T1 leased line), it combines multiple Internet connections for added performance and resilience.

System Requirements
Windows
Microsoft Windows 2000, XP or 2003
Pentium III 700 MHz Processor or better
512Mb of RAM
80 Mb minimum available disk space

Mac OS X
Mac OS X 10.3 or above
Apple Macintosh G4, G5, any Intel-based Mac
512 Mb of RAM
80 Mb minimum available disk space
